Software engineer with 14+ years building high-traffic iOS applications and the backend services that power them. I ship customer-facing mobile features in Swift and Objective-C, and design, build, and operate server-side and middleware services on AWS using the Coral service framework, Amazon DynamoDB, and streaming data pipelines. I own features end to end, from the native client through the service layer to analytics, and I mentor the engineers around me. Contributor to an Apple Design Award winning iOS app.

Core Competencies

- **Languages**: Swift, Objective-C, Java, JavaScript.
- **iOS & Mobile**: UIKit, SwiftUI, VIPER, MVVM, Core Data, Auto Layout, XCTest, Instruments, Xcode.
- **Backend & Services**: Coral service framework, REST APIs, microservices, server-side & middleware development, API design.
- **AWS & Data**: Amazon DynamoDB, DynamoDB Streams, AWS Lambda, Amazon CloudWatch, data pipelines, data-lake ingestion (Andes).
- **Practices & Tools**: CI/CD, A/B testing (Weblab), unit testing, performance optimization, code review, Agile, mentorship, Git.

Professional Experience

Amazon **Bangalore, India & Berlin, Germany**
Software Development Engineer (iOS & Backend) *Sep 2022–Present*

- Engineer iOS components for Amazon India's high-traffic top-navigation surface, powering quick access to strategic businesses including Amazon Pay, Amazon Now, and Bazaar in a large-scale production environment.
- Led implementation of native skeleton loading states in the Amazon shopping app to improve perceived performance during content fetch and render across high-traffic surfaces.
- Design, build, and operate backend/middleware services for the Shopping Aids Platform, including the AWS SA-Filtering Coral service that enforces guardrails (frequency capping, deduplication, time gaps) and persists impression data to Amazon DynamoDB.
- Built analytics pipelines consuming DynamoDB Streams and ingesting into the Andes data lake; integrated A/B testing (Weblab), platform detection, and multi-language localization.
- Mentor engineers through code reviews and structured guidance, and improve development processes for productivity and delivery predictability.

Immobilien Scout GmbH **Berlin, Germany**
Senior Software Engineer (iOS) *Jan 2018–Aug 2022*

- Ensured the performance, quality, and responsiveness of production iOS applications.
- Set up and maintained CI/CD pipelines for mobile builds and releases.
- Identified and corrected performance bottlenecks and fixed defects; contributed to hiring, onboarding, and mentoring.

Bonial International GmbH **Berlin, Germany**
iOS Developer *Aug 2016–Dec 2017*

- Implemented the data sync feature and built features using the VIPER architecture.
- Wrote unit tests covering edge cases, usability, and reliability; fixed bottlenecks and defects.

VMware **India**
Software Engineer (iOS) *Nov 2014–Jul 2016*

- Developed advanced iOS applications; collaborated cross-functionally to define, design, and ship features.
- Unit-tested for robustness; worked on defect resolution and application performance.

- **Robosoft Technologies** — **India**
  Software Engineer (iOS) — *Jun 2011–Nov 2014*
  - Built and shipped iOS features; ensured performance, quality, and responsiveness.
  - Contributed to WWF Together, an iOS app recognized with the 2013 Apple Design Award.

Education

- **Visvesvaraya Technological University** — **India**
  Bachelor of Engineering (B.E.), Computer Science — *2007–2011*

Honors and Awards

- **Apple Design Award (2013)** – contributed to WWF Together, recognized for excellence in design and innovation.

Languages

- English (professional), Kannada (native).
